7.1.2

Water conservation facilities available in the Institution:

- Rain water harvesting- YES
- Bore well /Open well recharge- YES
- Construction of tanks and bunds- NO
- Waste water recycling- NO
- Maintenance of water bodies and distribution system in the campus-No

Rainwater harvesting technique is used in the college for collecting and storing rainwater into a soak pit to improve and replenish underground water table. Rain water falling on the ground and roof area is directed through PVC pipes into a soak pit of size 24 feet by 12.5 feet and 7 feet deep with 2 compartments. Overflow if any is diverted through PVC pipe into Nashik Municipal Corporation overflow pipeline. Maximum amount of rain water is thus allowed to be absorbed in soil percolation pit is one of the easiest and most effective system of harvesting rainwater.

College thus by collecting our own rainwater is conserving this precious resource. Efforts are taken by college to create awareness about significance of rain water harvesting and water conservation through taking lecture on regular syllabus of Environment Studies and through guest lectures organized.
